

e₹uropee

Introduction

eRupee (₹) is First South Asian crypto-currency. In last decade, blockchain technology thrive in many parts of the world but the Indian Subcontinent is lagging in this sector. So, main goal of our company is to make blockchain technology accessible to every South Asian.

The founders of the eRupee (₹) started the in-depth research on the block chain technology and successfully built the technical platform for the crypto currency exchange business. The company serves the industry and the users with the high value services and flexible operations strategies to make the best benefits for all.

₹ provides the storing and processing of the digital transactions in a secure, protected and a transparent way. The system offered by the company is based on the block chain application and also follows all the crypto currency standards. The aim of the company is to achieve the higher return value from the Crypto currency transactions and exchange market.

What is eRupee (e₹) ?

eRupee (e₹) is token created in the form of ERC20 Ethereum Tokens. Rupee (₹) is a currency used in Indian subcontinent. So, we choose this name to used for electronic payments.

Ethereum Blockchain with its peer-to-peer and Smart Contract features is the technology behind its creation.

Therefore, it is Secure, Faster, Accurate and Convenience. The transactions can be done by anyone anywhere in the world to anyone anywhere in the world. Hassle free, Anonymously, No third parties, No intermediaries.

eRupee (e₹) will be the only token used in the **ecosystem** we are planning to create. Ecosystem will increase the penetration of eRupee as well as entire blockchain technology.

Ecosystem

eRupee (₹) will be the only token used in the ecosystem we are planning to create. Ecosystem consist of platforms like a Trading Exchange, Payment Gateway, E-Store, Marketplace.

A trading exchange

- Token trading.

Payment Gateway

- to make it easy for 3rd party applications and platforms to pay via eRupee.

E-Store

- DApp's, DGame's
- Apps and Games.
- Hybride Structure.

Marketplace

- for selling goods
- products
- services

Beta Version of Exchange **₹Xchange** launched in June 2018.

Ethereum

As explained by the Ethereum documentation, “Ethereum is a decentralized platform that runs smart contracts: applications that run exactly as programmed without any possibility of downtime, censorship, fraud or third-party interference. These apps run on a custom built blockchain, an enormously powerful shared global infrastructure that can move value around and represent the ownership of property. This enables developers to create markets, store registries of debts or promises, move funds in accordance with instructions given long in the past (like a will or a futures contract) and many other things that have not been invented yet, all without a middleman or counterparty risk.”

You can read more about ethereum project on <https://ethereum.org>.

Uses

It will give you the freedom to use tokens for almost everything, It can be used to buy and sell products, services, goods using single system. A utility cryptocurrency is designed for a particular task, Designed to facilitate fiat money transfer in an economical and highly efficient manner, like ripple is used by multiple banks and institutions.

With the exponential growth of cryptocurrency businesses, investing can be complex. This complexity has no doubt hindered mass adoption and prompted the need for trusted user-friendly tools to attract more traditional investors.

The information will be provided to users from traders whose authenticity and credibility have been verified based on reputation and performance. This in turn will provide our users with the credible analysis and strategies they need to have confidence trading. In the long term, the exchange trading platform aims to help build and evolve a network of profitable traders by enhancing their skills, confidence and profitability.

Currently, eRupee is navigating by an ambitious roadmap that involves the development of three signature products, as well as a foundational proprietary blockchain that will be utilized to manage the whole enterprise. The platform's end goal is to bring scores of new traders into the crypto space by mitigating as many roadblocks as possible as well as aiding the broader trading world altogether.

Mission

Indian subcontinent consist of almost 2 Billion people. Before independence everyone could trade easily. But now it becomes hard to do the same.

Also, country with lot of diversity and rich culture sadly has a lot of population below poverty line. The blockchain technology has a power to overcome their problems. Such as farmers can sell their goods directly on a marketplace and the payment will be done by eRupee (₹).

Such kind of system will eliminate middle men in agricultural industry, ecommerce industry, logistic services also international trade.

As it cost pennies to transfer money, this can revolutionise the whole process.

It is our mission to make this possible. The whole ecosystem will change the way we trade.

Plastic Money Vs. eRupee (e₹)

Problems with plastic money

Cryptocurrency was created to deal with fiat currency and plastic money. It has many issues such as

Lost credit/debit cards

Credit/Debit Cards got declined

Credit/Debit Cards got hacked

Fail to withdraw money from ATM

ATM out of cash

Limited withdrawals/Usage

Features of eRupee (e₹) token

90% will be distributed and 10% will be reserved for eRupee org, development, promotion.

Timeline

Multiple Stream of Income

INVEST

You can participate in our lending program by investing in our trading bot that not only trade bitcoin's volatility but Bitcoin volatility. With a well build bot that diversifies we stand a greater chance of making profits continuously, meaning our daily payouts will mostly be in a positive almost every time.

TRADE

Make profits in our internal exchange by buying and selling eRupee, buy low and sell high. The price of eRupee is determined by supply and demand so you can take advantage of the fluctuating price and trade it for profits. We are also looking to be listed on external exchanges in the future, that will give eRupee more volume and the volatility will make great gains for those trading eRupee.

STAKE

Staking or minting eRupee is a great way to earn extra coins, when you download our wallet and hold your coins you will be credited with more eRupee coins. The more coins you hold the more , you will be credited. This method ensures that the price of eRupee remain stable as more and more people will be holding their coins rather than dumping or selling. Staking earnings will be at 15% per month.

PEER TO PEER

eRupee coin is a peer to peer mode of exchanging value, there are no intermediates or central banks involved, it is purely controlled by its users across the world.

LIMITED SUPPLY

There will only be a maximum supply of 5 trillion coins. This will ensure that the price of eRupee Coin will always be rising as there will be a limited supply, the closer we reach the maximum supply in circulation it will increase demand and scarcity of the coin which in turn will cause the price to rise.

Crypto Currency

A Crypto Currency is a significant medium of exchange, which allow the people to use the cryptography to secure transactions and also helps in controlling the creation of the additional currency units. In the year 2009, a payment system was created by Satoshi Nakamoto, which was named as Bitcoin. This system was based on the revolutionary technology of Blockchain, which had the significant potential to restructure and rebuild the infrastructure of the financial services.

The development of the crypto currency has been high in the past decade. In the August 2017, the market value of the global crypto currencies has reached \$100 billion. The active development of the crypto currency displays its potential to provide the wide array of the transactional possibilities for both organizations and users. The daily exchange value, all over the world has also reached the astonishing value of \$5 billion.

Therefore our aim is to establish ourselves the first digital currency, where the value and distribution of the currency is not just controlled by the miners, but that people and community also play a significant role in it. The eRupee (₹) aims towards empowering the Indian subcontinent with this revolutionary technology.

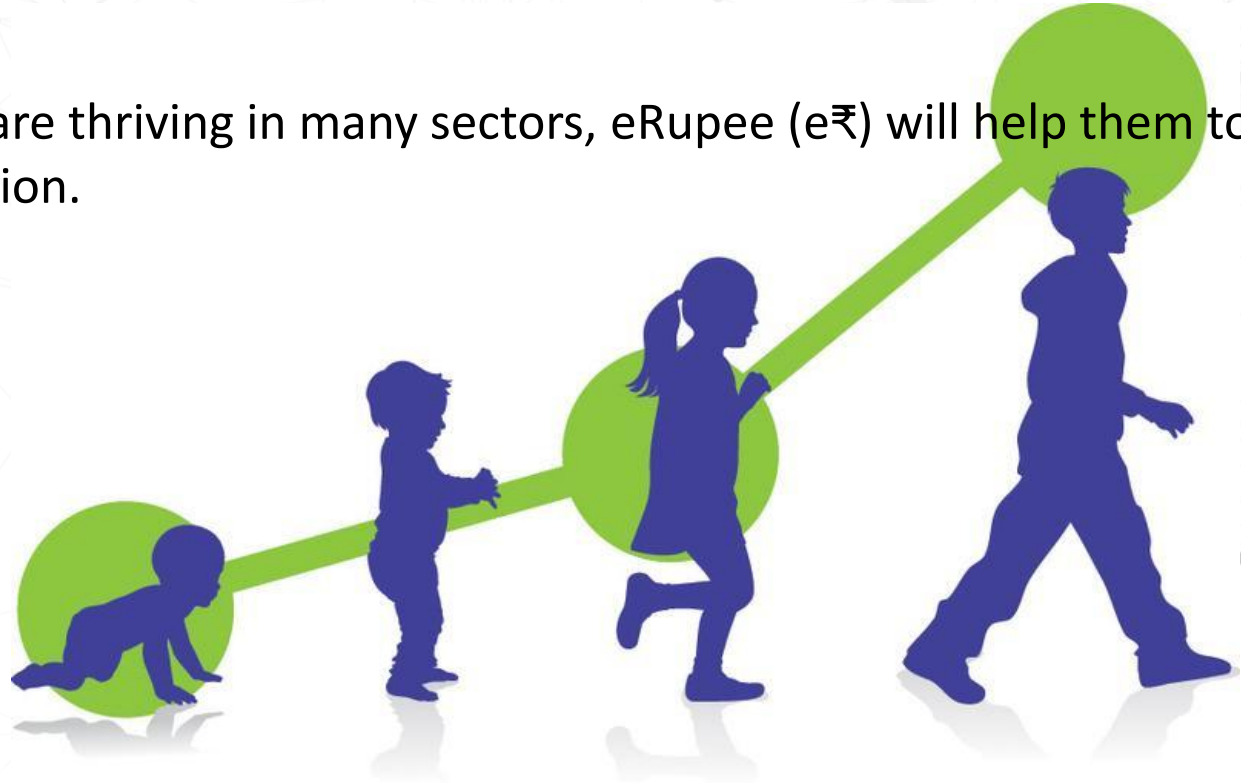

The Growing Market

At the current time more and more organizations and investors are recognizing the potential of the Block chain technology and this market is significantly growing faster than the classical capital market.

In the first six months of 2017, the trade including the crypto currency has increased to approximately 10 folds.

Also Indian startup's are thriving in many sectors, eRupee (₹) will help them to ride on blockchain revolution.
